Evergreen-CM™ by Genteq™ is World's First Universal ECM Retrofit for Light Commercial Heating and Cooling

High-efficiency ECM technology available for the first time as a replacement motor

Fort Wayne, Ind. (DATE) – Genteq™, a division of Regal Beloit Corporation, has introduced Evergreen-CM™, the world's first universal ECM aftermarket motor for light commercial heating and cooling applications. Using up to 74 percent fewer watts than a standard indoor blower motor, Evergreen 277 instantly upgrades the efficiency of most light industrial heating and cooling equipment.

The ultra-high-efficiency ECM (Electrically Commutated Motor) has become the preferred motor for energy-saving HVAC systems. Evergreen-CM is made with the same field-proven, high-efficiency ECM technology that has been used for more than 20 years in *new* HVAC equipment, but it is the first ECM developed exclusively for aftermarket replacement applications. It features a patented rotation detection technology that automatically matches the HVAC system's fan rotation. In addition, Evergreen-CM's dual voltage capabilities and multiple speed/horsepower profile combinations make it a retrofit solution for most HVAC applications.

"It is very exciting to provide this energy efficiency, comfort and indoor-air-quality solution to the homeowner," said Preston Davis-Robinson, Genteq aftermarket leader. "Previously, the only option for companies that wanted a more energy-efficient HVAC system was to purchase a complete new ECM system. Evergreen-CM gives businesses the ability to simply replace their inefficient PSC motor with a high-efficiency ECM model."

The Evergreen-CM replacement motor upgrades the heart of an HVAC system while using up to 74 percent fewer watts than a standard indoor blower motor.

Evergreen is the world's first high-efficiency motor for replacing an existing blower motor in light heating and cooling equipment. Evergreen is based on over 20 years of field-proven ECM technology made by Regal Beloit (NYSE: RBC), a leading manufacturer of mechanical and electrical motion control and power generation products serving markets throughout the world.
